

# Solutions & Services Overview

# Objects' Glossary & Online Documentation (HyperCards)

With this service useful for end users and self-service data models:

1

The Objects' Glossary of a Strategy (formerly Microstrategy) project is generated. The glossary can be generated for the following objects:

- Attributes
- Facts
- Metrics
- Other objects can be considered at the customer's request ...

2

Once the information of each object has been gathered, it can be used to generate Online documentation taking advantage of Microstrategy's HyperIntelligence technology.

The collage illustrates the process of generating an Objects' Glossary and Online Documentation in Microstrategy. It features several screenshots of the software interface:

- Attribute Editor:** Shows the configuration of attributes for a 'Customer' object, including fields like Name, Last Name, First Name, Address, and Email.
- Revenue Fact Editor:** Displays the configuration of facts for a 'Revenue' object, including fields like CITY\_SOLD, UNIT\_PRICE, and DISCOUNT.
- Covariance (Reference Item Correlated Item) - Metrics Editor:** Shows the configuration of metrics for a 'Covariance' object, including fields like Reference Item, Correlated Item, and Metric.
- Objects' Glossary:** A central screenshot showing the generated glossary for the 'Customer' object. It lists various attributes and their definitions, such as 'CITY\_SOLD', 'UNIT\_PRICE', and 'DISCOUNT'.

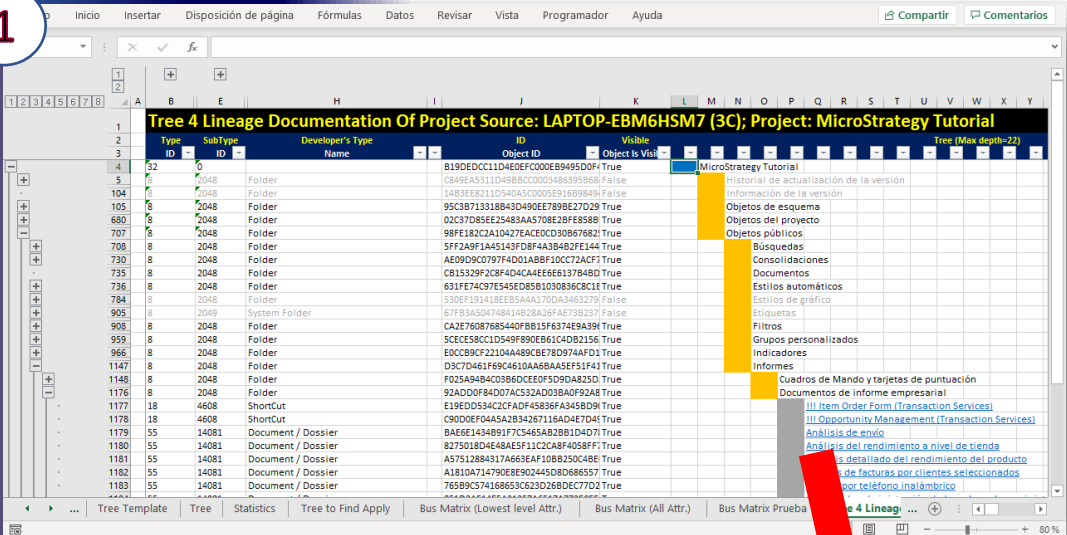

Red arrows and numbered circles (1 and 2) indicate the workflow: (1) configuring the data source and (2) generating the glossary and documentation.

# Documentation and Object's Lineage

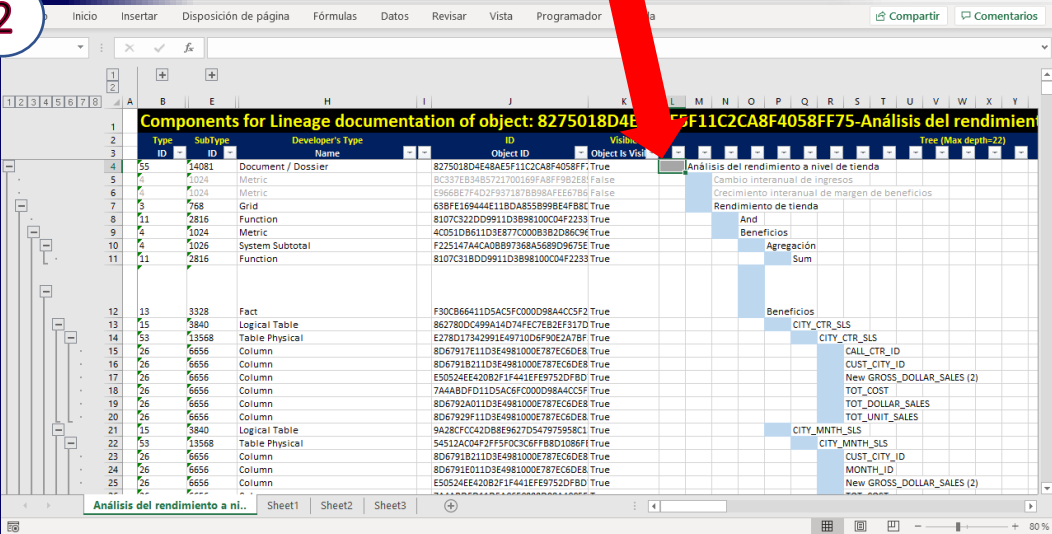

With this service the Object's Lineage of a **Strategy** (formerly **Microstrategy**) project is generated. This Lineage can be generated for a set of objects (one folder) or for the entire Project.

- 1
- First a tree is generated with all the objects of the given project and the information related to them.
- 2
- Once the tree is generated, the lineage of each of the object can be accessed by clicking on the link.

1

2

# Documentation 2 Find 'Apply' functions documentation

With this service the functions 'Apply' embedded in the objects of a **Strategy** (formerly **Microstrategy**) project, as attributes, metrics, etc.. can be found very quickly

Within the information of each object:

- It is included the concept **Definition** where the **forms** and **expressions** can be found, and there is where the **Apply** function can be found
- Objects containing Apply functions are in red to be detected very quickly.
- Very useful for **upgrade** or **migration** of warehouse's database

| Object ID | Version ID                          | Description           | Definition                                                                                      |
|-----------|-------------------------------------|-----------------------|-------------------------------------------------------------------------------------------------|
| 677       | 6C89A8B711D3E4F13000E887C8D68 True  | Hace 2 Semanas        | 68DA465747683F372771A953B755E2A Transforma el día en la fecha de hace dos semanas (4* DAY_DATE) |
| 4554      | 96ED42A511D58117C000E78A4CC3F2 True | Día de hace 2 semanas | 3334138AF11D77F4B8000928E4E571A0D Exp1: ApplySimple("90-14* DAY_DATE)                           |
| 4500      |                                     |                       |                                                                                                 |

# Bus Matrix

With this service the bus matrix of a **Strategy** (formerly **Microstrategy**) project is generated, as reverse reengineering once the development is done. The relationship between attributes and facts can be found, which will help us to:

- **Detect that the relationship between them are the desired ones** and
- **Avoid unexpected cross joins** due to lack of the relationship between attributes and facts.

[illegible]

In the screenshot, a folder (background in yellow) can be found, although it has the same name, it is considered different since the ID is different. And the rest of the objects of a **Strategy** (formerly **Microstrategy**) project that are not folders and are in red indicate that they have some difference, at least that they are not in the same path, that is why they do not appear in the parallel tree structure.

- **Version ID**
- **Update date**
- **Privileges**
- **Permissions**
- **Last user that accessed the object (Change journal)**
- **Etc...**

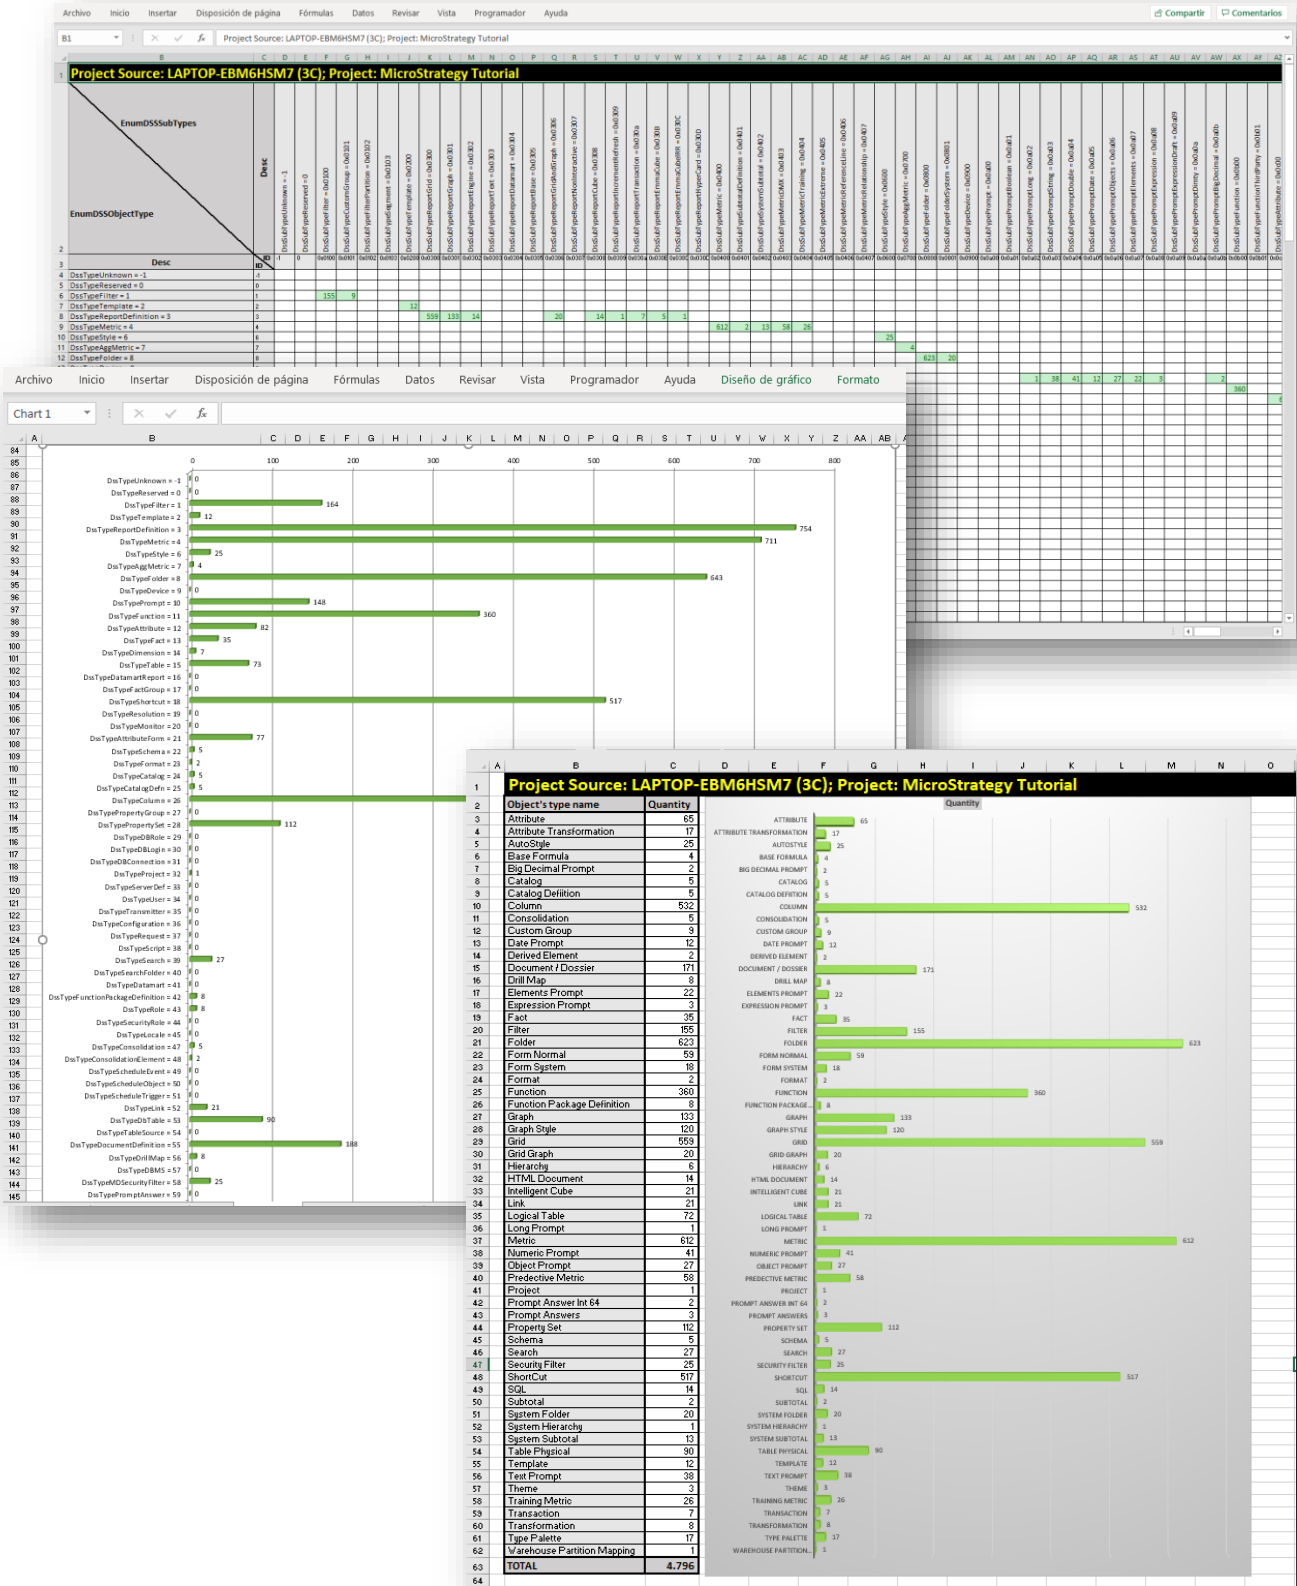

## Detection of objects that are likely to be duplicated

With this service the list of objects of a **Strategy** (formerly **Microstrategy**) project is generated to detect a possible duplication, a list of those that have an identical definition is collected. Therefore, it can easily be determined whether they are duplicates or, if this apparent duplication, in some cases, it may be valid according to the business point of view.
